

RECIPE FOR *the tale of water in my house*

BY *labtek apung & friends*

Description

The children of Tanah Rendah become the young architects, building miniature houses using cardboard and modeling clay.

The houses were connected in a row, just like the neighbourhood.

Ingredients

used carton/cardboard
paper A4/F4/Folio
ruler
pen
marker
coloured clay
glue stick
paper masking tape

Preparation

1

sketch plan - miniature house, facilitators (someone with background of architecture, design, environmental science, engineering, or urban planning) start with an introductory story on how to make the miniature housing.

2

Fill the house/s - with furniture, especially the position of the water source(s) and bathroom(s).

3

storytelling time -

Where is the place to urinate/defecate, bathe, and wash?

Where is the water source?

Where does the dirty water go?

This discussion process is exploratory.

Facilitators can explore further questions about understanding environmental conditions and current technology.
